COMMISSIONER FOR PATENTS
WASHINGTON, D.C. 20231

FIRST AMENDMENT

With reference to the Office Action mailed September 12, 2002, Applicant respectfully requests reconsideration of the subject application pursuant to 37 CFR § 1.111 in view of the following amendments and remarks.

Please amend the application as follows:

In the specification:

Please replace the paragraph at page 3, line 29 through page 4, line 14 with the following paragraph in clean form:

-- In the illustrative embodiment, a method for considering a receiver's characteristics in producing a copy of a document is embodied in a software routine stored in the memory 24 and executed by processor 22. Prior to execution of the software routine, a document to be copied is placed in the scanner 12 and scanned, producing the document data described above. Upon activation of the scanner 12 by a user, the system 10 responds by also scanning the next sheet of receiver feeder with the scanner 18, thereby producing the receiver data also described above. These data are now in their respective buffers 14 and 20. The spatial and color resolution of these scans can vary as desired. For the document, higher resolutions (i.e., 1600 by 1200 pixels, 24 bits per pixel) provide sharper images with more color depth. For the receiver, on the other hand, average characteristics such as overall color may be acceptable, requiring lower spatial and color resolutions. The buffers must therefore be large enough to store the highest resolution data desired.--
